

# Contact Lens Manufacturing Facility

St. Hubert, Québec

The project consisted in the preparation of the feasibility study, scope and budget for the project, followed by the supervision of design, construction and validation for a 10,000 ft<sup>2</sup> Grade C production area for the manufacturing of contact lenses.

This scope included the design of the production and operation areas, integration of the production equipment, autoclaves, laboratories and quality operations area. Support services outside the production area including ventilation, building automation system, chilled water, compressed air, steam, and RO water system.
