Located in North-Eastern Ethiopia, the Yara Dallol Potash Project involves the exploration and financial evaluation of a 600,000 TPY Potash Plant, producing Sulphate of Potash (SOP) through the use of Solution Mining technology and Solar Evaporation Ponds.

After completing a positive Scoping phase, Novopro has been mandated by Yara International ASA to advance the Project further by performing a Definitive Feasibility Study. Alongside the necessary Testwork, Design and Estimation elements of the Study, Novopro continues with an integrated approach to all facets of the Project’s management and development. In addition, Novopro is leading the design, construction and operation of a two full-scale solution mining pilot wells in the Dallol region, as part of the Study.
